# Predicting brewery locations with Machine Learning

Sarah Robinson

## **Breweries on the Rise**

The number of US craft breweries and brewpubs:

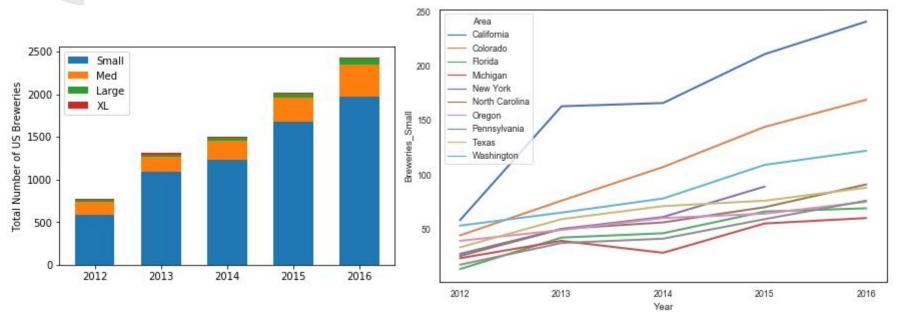

2,898 3,739 **4,544 5,424 6,266** 

2013 2014 2015 2016 2017

[According to the BreweriesAssociation.org]

### **Breweries on the Rise**

## The question:

Can we make accurate predictions about where breweries will thrive?

This would allow brewery, or potential brewery, owners to make informed business decisions about location.

U.S. Department of Commerce

## The Data

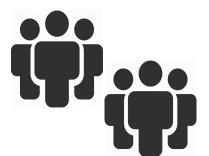

**SMALL:** 

1-19 employees

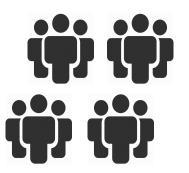

MEDIUM:

20-99 employees

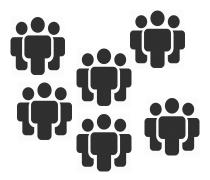

LARGE:

100-499 employees

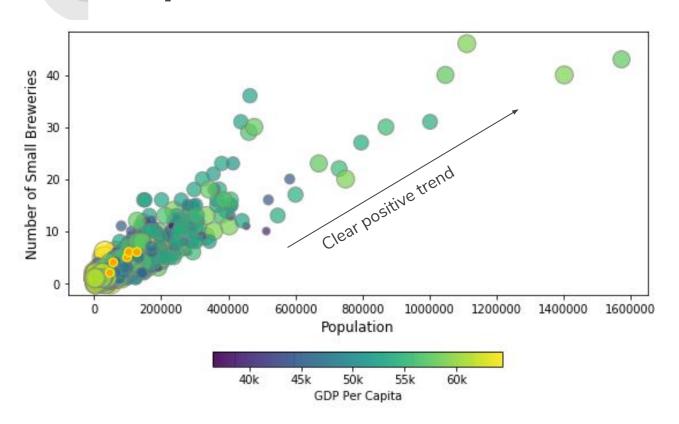

X-LARGE:

500 + employees

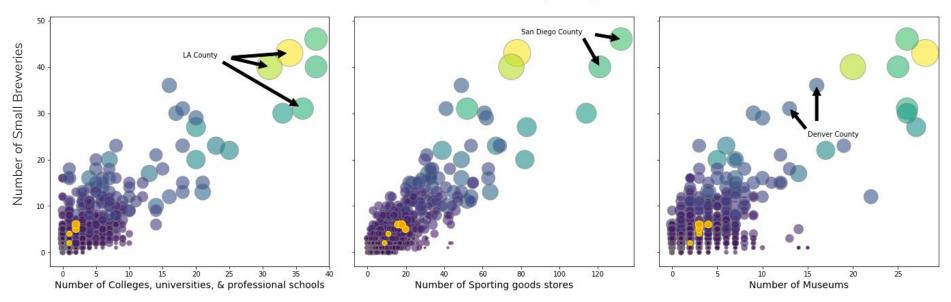

## **Population**

Number of Establishments by County

Orange bubbles indicate Santa Cruz county

## Zipf's Law (power law)

 $2 \times 10^{5}$ 

 $4 \times 10^{5}$ 

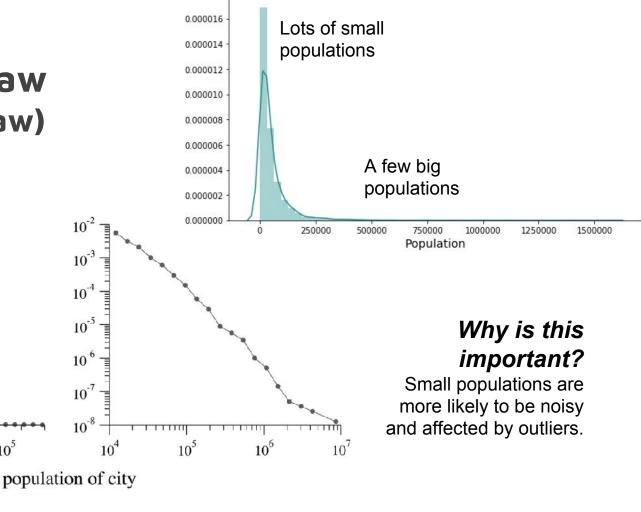

0.004

0.003

0.002

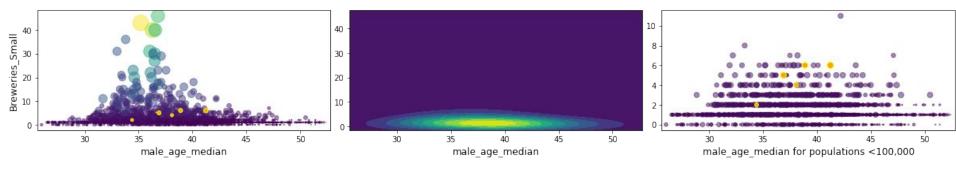

0.001

percentage of cities

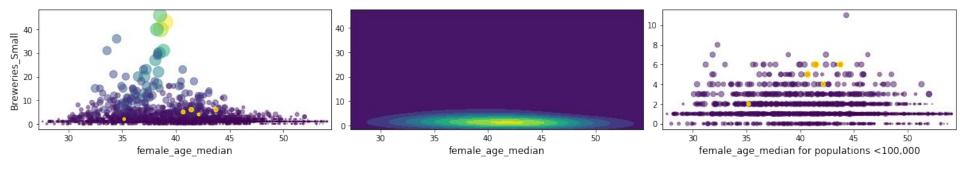

male\_age\_median

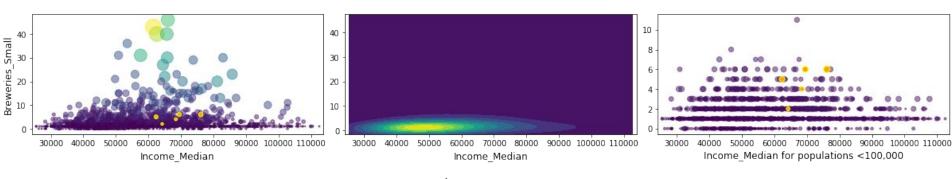

female\_age\_median

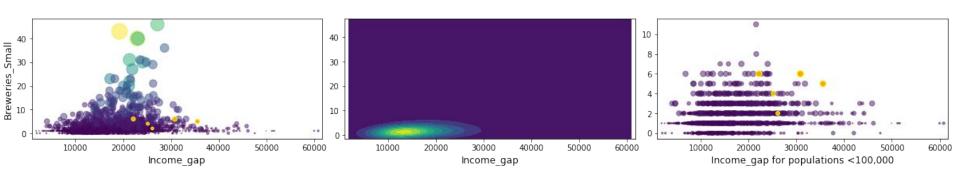

## Income

#### Income\_Median

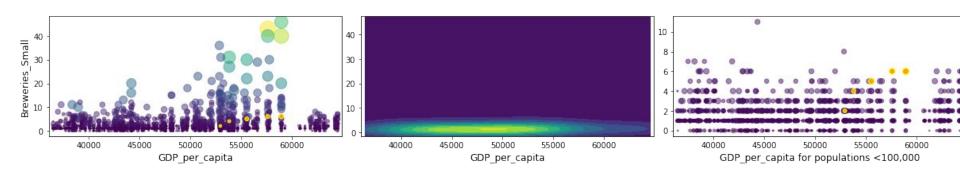

#### Income\_gap

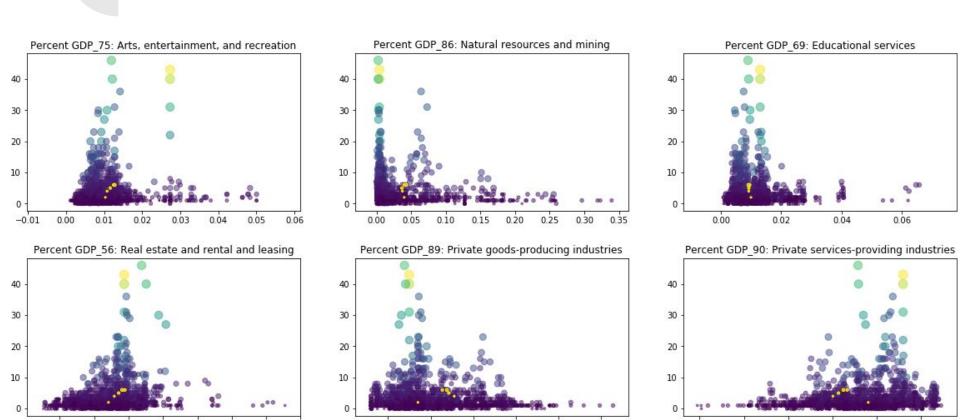

## **GDP** per Capita

#### GDP\_per\_capita

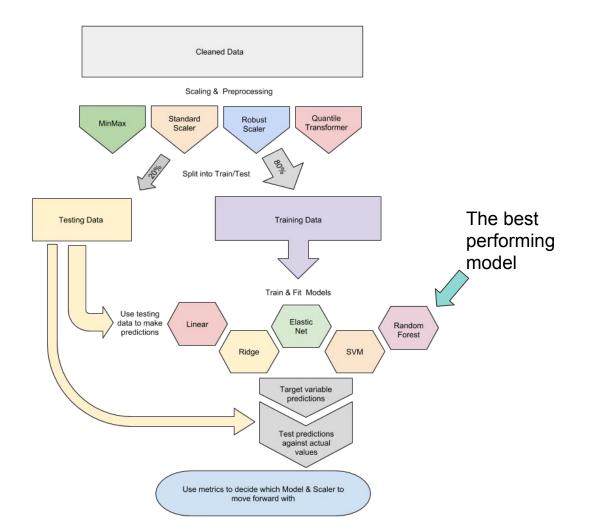

### **Industries and GDP**

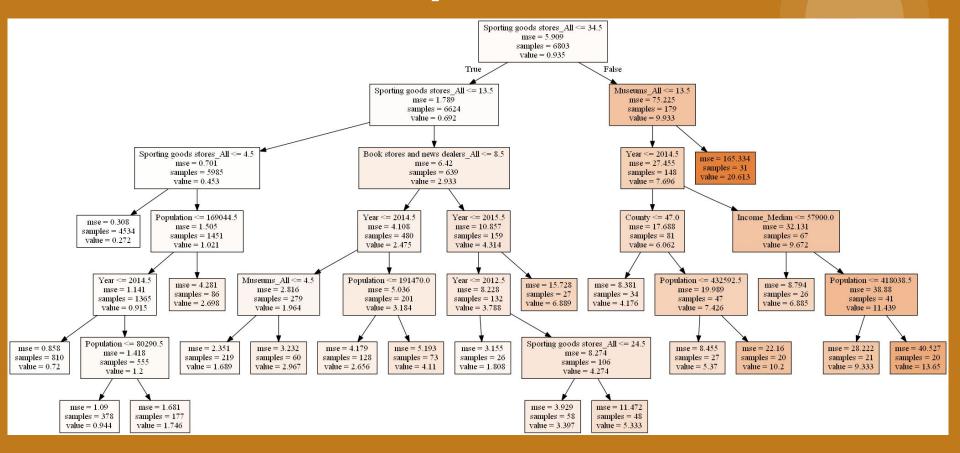

## Making Predictions with Machine Learning

- Try different methods of scaling combined with different model types
- Select the combination with the lowest error
- Tune parameters to make this model the best it can be

## Decision tree (simplified)

## **Predictions for Santa Cruz**

Year	all_age_median	population	Income_Median	Breweries_Small	predictions
2012	40.00	266794.0	72250.5	2.0	1.961667
2013	43.70	269395.0	83507.0	4.0	3.898333
2014	41.60	271529.0	69872.0	5.0	3.723333
2015	41.65	274299.0	69476.0	6.0	3.045000
2016	42.50	275196.0	77677.5	6.0	5.648333
	2012 2013 2014 2015	2012 40.00 2013 43.70 2014 41.60 2015 41.65	2012 40.00 266794.0   2013 43.70 269395.0   2014 41.60 271529.0   2015 41.65 274299.0	2012 40.00 266794.0 72250.5   2013 43.70 269395.0 83507.0   2014 41.60 271529.0 69872.0   2015 41.65 274299.0 69476.0	2012 40.00 266794.0 72250.5 2.0   2013 43.70 269395.0 83507.0 4.0   2014 41.60 271529.0 69872.0 5.0   2015 41.65 274299.0 69476.0 6.0

### Next time...

- Use rank data instead of actual numbers (because of Zipfs Law)
- Try different data sources (like the brewers association or google places API)
- Try Gradient boosting
